

2D vs 3D* Mammography

By the end of 2013

3 MILLION U.S. WOMEN
will have been screened with
3D mammography

3D

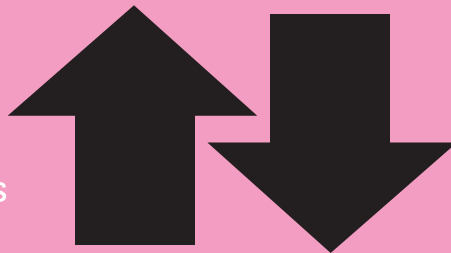

2D

3D
mammography
finds
40% more
invasive
cancers
than
2D
alone

27%

3D Mammography
finds 27% more cancers
than 2D

20-40%

Less
Chance of being called
back for another look

3D+2D > 2D

3D Mammography

may reduce the rate of unnecessary breast biopsies

Abnormalities
are better
visualized with
3D
mammography

3D
mammography
finds cancers
earlier than digital
mammography
alone

In women with
dense breasts,
the addition of
3D mammography
increases cancer
detection while
reducing
false positives
